

Poyatos comes for the 6th time in a row to this Bauma Show as a strongly consolidated company among the leading international manufactures of concrete block machines. That position is supported by a number of facts summarized as follows.

- A very modern factory that allows state of the art manufacturing of machines.
- A number of satisfied customers exceeding the 800 in markets spread in more than 75 countries all around the world. That has provided Poyatos of an extensive experience and know how over the years that they can now put at the service of all his clients.
- All over the last 35 years and a constant evolution, Poyatos have developed a technology that combines reliability, performance, efficiency and user friendliness, what joined with an excellent price has turned Poyatos into an offer that must be at the table of any decision maker who seeks profitability in his investments.

Our stand in the Bauma 2010 will be in the Hall B1, # B1201 and we will be glad to receive your visit there. ■

In this new Bauma 2010 Edition, PRENSOLAND, S.A. will launch a new model of his versatile TENSYLAND Moulding machine. This machine, well known for his versatility in product range, also allows the produc-

tion of reinforced concrete slabs as well as exposed wires and slab top marking, to be used in seismic areas.

The exposition of the wires and top marking are automatically carried out during the

production process, without need of any additional equipment. ■

PRIMUSS. Il metodo di produzione, unico al mondo, dei fondi di pozzetti può essere considerato a ragione l'inizio di una nuova era. Non sono più necessari i vecchi cicli di produzione, con molto dispendio di tempo e materiale, PRIMUSS consente la produzione di fondi di pozzetti su misura, pratica-

mente in un'unica fase di lavoro. La base ottimale per pozzetti è in cemento monolitico, consente la realizzazione di canali di qualsiasi forma geometrica ed ogni possibilità di collegamento, presenta canali ad arco di cerchio di forma regolare offrendo, in tal modo, eccellenti proprietà di scorrimento.

Tranne il cemento, non viene impiegato nessun altro materiale. PRIMUSS è uno sviluppo sostenibile che crea posti di lavoro moderni.

Visitaci alla fiera Bauma 2010! ■
