

New Kastmaster Machine Streamlines Pipe and Manhole Production

Designed for the manufacture of concrete pipe, manholes, and specialty products, the Kastmaster's linear production sequence

brings production line efficiency to your operation. Products are automatically manufactured utilizing advanced vibration technology, and then demolded and distributed from within the machine. The Kastmaster is easily installed in existing plants

as a stand-alone unit or integrated as part of a totally automatic factory. Machine models are available to manufacture up to 2000mm diameter products x 2.5M length.

The Hess Group will once again take advantage of the Bauma in 2010 - the three yearly hub and lynchpin of international mechanical engineering - to launch its

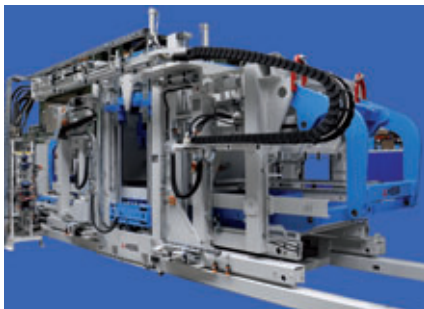

latest product innovations. The company is ranked amongst the world market leaders for machines and plant for the concrete block industry and will display major segments of its product portfolio on stand of more than 680 m². On show will be machines and plant for manufacturing concrete blocks, concrete plant conveying technology, concrete block finishing plants, moulds, concrete pipe plants, concrete mixing plants plus plant for manufacturing aerated concrete and sandlime. The trade public once again has the opportunity of visiting the Hess Group exhibition stand - the meeting place for those who are interested in

gaining information about the future of the concrete block industry.
