

Poyatos comes for the 6th time in a row to this Bauma Show as a strongly consolidated company among the leading international manufactures of concrete block machines. That position is supported by a number of facts summarized as follows.

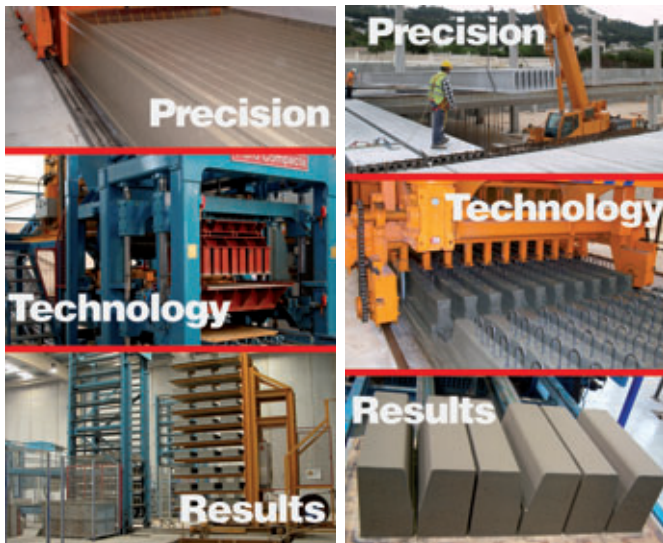

- A very modern factory that allows state of the art manufacturing of machines.
- A number of satisfied customers exceeding the 800 in markets spread in more than 75 countries all around the world. That has provided Poyatos of an extensive experience and know how over the years that they can now put at the service of all his clients.
- All over the last 35 years and a constant evolution, Poyatos have developed a technology that combines reliability, performance, efficiency and user friendliness, what joined with an excellent price has turned Poyatos into an offer that must be at the table of any decision maker who seeks profitability in his investments.

Our stand in the Bauma 2010 will be in the Hall B1, # B1201 and we will be glad to receive your visit there. ■

In this new Bauma 2010 Edition, PRENSOLAND, S.A. will launch a new model of his versatile TENSYLAND Moulding machine. This machine, well known for his versatility in product range, also allows the production of reinforced concrete slabs as well as exposed wires and slab top marking, to be used in seismic areas. The exposition of the

wires and top marking are automatically carried out during the production process, without need of any additional equipment. ■

PRIMUSS. This unique production technique in the manufacturing of manhole bases can be justifiably described as the beginning of a new era. Time consuming production processes with high material cost will disappear entirely. PRIMUSS allows the

production of customized manhole bases in one operation. The optimum manhole base is manufactured monolithically out of concrete with any possible geometry channeling and pipe connections. The channels have uniform circular arcs and hence ex-

cellent flow characteristics. Concrete is the only material. PRIMUSS is a sustainable development which creates modern jobs. Visit us at bauma 2010! ■
