

Hess Maschinenfabrik GmbH & Co. KG, 57299 Burbach-Wahlbach, Germany

Hess Group In-House Trade Fair 2011

The Hess Group once again sent out invitations to the traditional in-house trade fair at the company's headquarters in Burbach Wahlbach, Germany, on 22 and 23 September. More than 340 customers, suppliers, guests and friends from Germany and abroad took the opportunity to see for themselves the production facilities and latest developments at first hand on site.

As an entry-level machine, the new RH 1400-3 VA concrete block making machine is intended to pave the way for future customers of Hess's large pallet machines

The in-house trade fair at Hess has established itself as a regular international meeting place for the concrete block and pipe industry, where customers and suppliers exchange views. While numerous existing customers accepted the invitation to Burbach as in previous years, the event was attended this year by a noticeably large number of potential new customers, who were interested in the machines and plants on show. Concrete block making machines of all sizes were exhibited in the production halls. All the concrete block making machines exhibited featured the new oil bath vibrator. The new RH 1400-3 VA concrete block making machine met with particular interest. This machine is conceived as an entry-level model for cases where it is foreseeable that production will be changed to a large pallet machine after a few years. The RH 1400-3 VA is equipped with all components necessary for the manufacture of high-quality products, but consciously without many adjustment and handling options

in order to be able to offer the entry-level model at a particularly inexpensive price. To match this plant, a new model of the servo packet assembler 600 was offered with a load capacity of 600 kg. In addition to the concrete block making machines, a manhole bottom mould, concrete block moulds and an SM 3000-2 mixer with inclined bucket elevator were also presented in the production buildings, so that the visitors were shown an extensive excerpt from the Hess Group's range of products.
