

Kraft Curing Systems GmbH, 49699 Lindern, Germany

Founding of Kraft Curing Systems GmbH

Managing Director Michael Kraft, a founder of Kraft Energy, leads an international group of investors that has purchased the assets of the Kraft Energy concrete curing product line from Besser GmbH. Effective since March 2013, the original Kraft employees provide a source for professional project engineering, technical service and parts supply for our valued customers. Kraft is again located in its former manufacturing facility in Lindern, Germany.

Kraft Curing Systems' North American location at A.L. Patterson, Inc. in Fairless Hills, Pennsylvania.

Kraft Curing Systems continues to provide the level of service and quality equipment that the international concrete community has come to expect from the Kraft name for the past twenty years:

- Economical concrete curing solutions
- Quality concrete curing equipment
- Customer service and spare parts availability

Kraft is proud to have strategic partners that contribute not only investment support, but also - more importantly - business experience and industry knowledge. As Kraft's former Production Manager, Sascha Kansy, Co-Managing Director at Kraft Curing Systems, brings an experienced perspective to its equipment design and production philosophy.

A.L. Patterson, Inc., an established supplier to the manufactured concrete industry in

North America for over 40 years, has over 20 years of sales and service experience with Kraft concrete curing products. The significant infrastructure, industry knowledge, business stability and reputation for high quality customer service provided by Patterson allows Kraft to immediately reestablish its North American parts, sales and service presence. Patterson is expanding its business through strategic partnerships. In 2010 A.L. Patterson, Inc. acquired Nycon, an international supplier of reinforcement fibers used in the concrete products industry.

A civil engineer, Bruce Post, President and CEO of Precast Systems, designs and manufactures structural prestress concrete elements. Being an early adopter of Kraft curing technology since 1998, Precast Systems has experienced its benefits. "The equipment provides us with many advan-

tages and the Kraft team has taken care of us as a customer. When the opportunity arose, it made sense for us to invest."
