

Kraft Curing Systems GmbH, 49699 Lindern, Germany

Opening of new building

On Friday, November 15, the new production hall with office building was officially opened at Kraft Curing in Lindern at a ceremony attended by 100 invited guests. After 17 months of improvising and working in containers and in the open air, the Kraft employees were recently able to move into modern, bright offices.

The construction and final assembly departments were also given considerably more space. The larger hall means that modern machines and forward-looking production techniques can now be used to further consolidate and expand Kraft Curing's status as a global expert in controlled concrete curing.

On the occasion of the ceremony the managing directors Michael Kraft and Sascha Kansy thanked the Lindern fire brigade for their help in the fire that destroyed the old company building in June 2018. Visitors were shown around in the new premises and received demonstration and first hand explanation of the concrete curing equipment and machines.

Visitors inspect the exhibits of curing equipment.

Like on a trade show, visitors were most curious to learn how a direct-fired vapor generator produces steam.
